LUXE

S T O R E

What our website does

A plain-English tour of every feature, for shoppers and shop owners

Prepared 19 May 2026

In a nutshell

Luxe Store is an online shop with a difference. Instead of the usual rows of products, shoppers swipe through items the way they would on TikTok or WhatsApp Status — a full-screen, elegant experience that feels more like browsing a magazine than a catalogue.

It is also built around gifting. Anyone can pick a product (or build a beautiful hamper of several items), pay for it, add a personal message, and send the recipient a private link. The recipient opens that link and 'unwraps' the gift with an animation — they never have to pay, register, or do anything else.

Behind the scenes, the shop owner gets a powerful control panel to manage products, bundles, orders, payments, gifts and settings — all from one place.

Part 1 — For Shoppers (the people buying)

DISCOVERING PRODUCTS

- A swipeable, full-screen feed of products — much like TikTok. Tap and hold to pause on an item; use arrow keys on a computer.
- A classic grid view as well, so people who prefer the traditional layout still feel at home.
- Smart filters on the side: categories (e.g. Beauty, Electronics, Fashion), price ranges, and tags such as 'New Arrival', 'Bestseller', 'Sale' or 'Gifts only'.
- A search bar that finds products instantly as you type.
- Each product has its own detailed page with a gallery of photos, size or colour options where relevant, and a list of related items.
- A 'Saved' list — shoppers can tap a heart to bookmark anything they like for later.

GIFT BUNDLES (HAMPER)

- Some items in the shop are bundles — a curated collection of several products sold together (think a 'Pamper Hamper' or 'Office Essentials Kit').
- When a bundle doesn't have its own photo, the website automatically draws a beautiful gold gift-box graphic with the included products peeking out of it.
- On a bundle's page, shoppers see exactly what's inside — every item, its photo, name and quantity.

BUYING & PAYING

- A slide-in cart drawer where shoppers can adjust quantities and review their order.
- Two ways to pay:
 - M-Pesa STK-push — the shopper types their phone number, a payment prompt pops up on their phone, they enter their PIN, and the order is done. The cart clears automatically once payment succeeds.
 - WhatsApp checkout — for shoppers who prefer to chat. The website builds a tidy order summary and opens WhatsApp with the message pre-written, ready to send to the shop.
- A 'Quick Buy' option that skips the cart entirely — pick the size, hit a button, pay.

THE GIFTING EXPERIENCE

This is what makes Luxe Store special. Sending a gift is a four-step story:

1. The shopper picks a product (or builds a hamper of several items).
2. They open the Gift sheet, type the recipient's name, their own name, and a personal note.
3. They pay (via M-Pesa or WhatsApp). The shop is notified.
4. The recipient gets a private link.

When the recipient opens the link, they don't see a boring receipt. They see a wrapped gold gift box on a starry background. They tap it. The lid lifts off, gold bubbles rise into the air, and the gift is revealed — their name in elegant gold lettering, the product (or every item of the hamper) presented in a framed, ornate card, the sender's personal note, and a 'Paid in full · Luxe will be in touch' confirmation. They don't have to pay, sign up, or do anything else.

THE SURPRISE CONCIERGE — AN AI GIFT ADVISOR

- If a shopper doesn't know what to buy, they can chat with the Surprise Concierge.
- It asks a few friendly questions: the occasion, the relationship, the budget.
- It then suggests products from the catalogue, and can even build a custom hamper out of several items right inside the chat.

Part 2 — For the Shop Owner (the admin side)

A DASHBOARD AT A GLANCE

- Total products in the catalogue, how many are active vs draft, how many are out of stock.
- Total revenue and recent orders.

MANAGING THE CATALOGUE

- Add, edit and remove products — each one with multiple photos, descriptions, prices, categories, tags and SEO fields.
- Variants — for products that come in several options (e.g. small/medium/large or red/blue/black), each option can have its own price and stock count.
- Bundles — flip a product to 'bundle' mode, pick the items it contains, and the shop automatically works out whether the bundle is in stock based on what's available.
- Bulk actions — tick several products at once and update stock, activate, draft, feature or unfeature them in one click.
- Categories — create and reorder the shop's sections.
- Availability tags — the badges that appear on product cards, like 'New Arrival', 'Limited Edition', 'Bestseller'.

ORDERS & PAYMENTS

- Every M-Pesa transaction is logged with the amount, customer phone number, status and timestamp.
- Every WhatsApp checkout is also recorded.
- Gifts have their own list — see who sent what to whom, mark them as paid manually if needed, copy the claim link to share again.

SETTINGS

- Store identity — name, logo, description, currency.
- Custom price tiers so the 'Budget' filter on the shop matches the local market (e.g. 'Under Ksh 500', 'Ksh 500 – 2,000', 'Over Ksh 5,000').
- WhatsApp number — the destination for incoming orders.
- M-Pesa configuration — API keys for the payment provider (SunPay), to enable STK-push.
- Email — connection to Brevo, so customers automatically get an order receipt and staff get a sales notification.
- The Surprise Concierge is powered by a built-in AI service — no setup required.

Part 3 — The look and feel

Deep black backgrounds with rich gold accents — modelled on luxury fashion houses.

- An elegant serif logo (LUXE STORE) with a small gold diamond ornament.
- Subtle animations everywhere: twinkling stars on the gift page, rising bubbles when a gift is unwrapped, sparkles around the 'Your gift is revealed' header, items that gently fade in one after another.
- The whole experience works just as well on a phone as on a laptop — the layout adapts automatically.

In short

Luxe Store turns the everyday e-commerce experience into something more like opening a present. Shoppers swipe, save and send gifts that arrive with a real sense of occasion. Shop owners get a calm, modern control room with everything they need — products, orders, payments, emails and AI-assisted gifting — in one place.
